

TRIGENICS®

FUNCTIONAL MUSCLE NEUROLOGY

R.T.P.® COURSE

BETTER RESULTS INCREASED INCOME Leading Edge

"The multimodal stimulation approach utilized in Trigenics® is consistent with the principles of neuroplasticity and enhanced corticoneural reorganization of the somatosensory and sensorimotor systems."

Dr. Fredrick Carrick, DC, PhD, DACAN, DABCN, DACNB, DAAPM, FRCPN, FACCN, FAFN, FEAC (Neurology), FACFN, FABVR, FABES, FABCDD, FICC Professor Emeritus of Neurology, Parker College Distinguished Post Graduate Professor of Clinical Neurology, Logan College, Professor of Clinical Neurology, Carrick Institute (Dr. Carrick's quote is not meant as an endorsement)

"I found the Trigenics® functional neurology course to be extremely dynamic and useful. It was an excellent fit with my formal medical education, with special interest in physical medicine. Trigenics® has armed me with very effective and practical methods to help patients with neuromusculoskeletal disorders in my clinic immediately" **Dr Irina Gainullina, MD**

"For Physiotherapists Trigenics® has added many aspects of neuro-muscular medicine concepts for significantly increased results and treatment success which I could not have otherwise attained. It has actually also been a great "Plus" for the business side of my physiotherapy practice." **Line Troster, PT**

"The Trigenics® functional muscle neurology course is the best and most valuable course I have ever taken. I am getting tremendous results easily with the most difficult and complicated cases. It has also significantly increased the clinic income. I recommend it highly to all manual medicine practitioners!!"

Dr. June Anne Kelly, DO, NMD

"As a Sports Specialist, I have treated many Olympic and elite athletes over the last 25 years. I have found Trigenics® functional neurology, to be the most versatile and comprehensive treatment system I have ever used. The RTP® program was top notch with excellent reference material provided which supports the advanced neurology and science behind Trigenics®. Compared to other courses, this one is a bargain for the knowledge and skills gained."

Dr. John Definny DC, FCCSS

Registered Trigenics® Physician/Practitioner (R.T.P.®) Course

FUNCTIONAL MUSCLE NEUROLOGY® *COMBINING EXERCISE WITH TREATMENT*

Trigenics® is a functional assessment and treatment system which uses *interactive applied functional neurology* to reset the way the brain communicates with the bodies muscles. The result is that of **immediate, dramatic pain relief with instant increase in strength and movement**. A worldwide leading innovation in the field of functional neurology, Trigenics® has revolutionized the way patients with musculoskeletal disorders and pain syndromes are treated.

Founded by Dr. Allan Oolo Austin, Trigenics® was the first in history to introduce the concept of combining muscle treatment with resisted exercise. The therapeutic neuroplastic effects of Trigenics® are unprecedented!

Trigenics® is used by manual medicine physicians such as **osteopathic and chiropractic doctors** as well as **physiotherapists**. Fitness or athletic **trainers** and licensed **massage therapists** also use variations of Trigenics® for muscular balance assessments and/or treatment of physical pain conditions as well as neuromuscular retraining.

Patients are interactive participants in the treatment process. Practitioners apply 3 techniques simultaneously using their hands and body or a combined variety of treatment devices and/or exercise equipment.

COURSE DESCRIPTION

THEORY

Education as to the theoretical science of Trigenics® followed by methodology of how to specifically apply the treatment procedures.

FUNCTIONAL MUSCLE NEUROLOGY

Learn applications of functional neurology through overload of sensorimotor movement regulation using principles of amplitude summation, convergence projection, corticonural re-organization and neuroplasticity.

MYONEURAL TREATMENT PROCEDURES

Workshop format. Neurokinetic testing procedures are taught using the principles of orthopedic muscle testing for inhibition or over-facilitation. Related functional anatomy, neurological innervation, aberrant movement patterns and clinical overviews are discussed.

Students learn how to combine the 3 components of Trigenics®: *resisted exercise movement*, *distortional stimulation of mechanoreceptors* and *biofeedback breathing*. Specific protocols for treatment of individual muscles are demonstrated, practiced and integrated. www.trigenics.com

EVALUATIONS

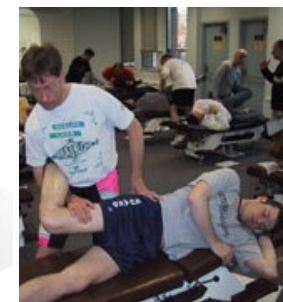

Pre-course home quiz
2 Patient case studies
Trigenics® written thesis or project
Practical procedural examination

48 CE Credits - Co-sponsored by
“National University of Health Sciences”

Practitioners: Early Reg. \$2,299 Reg. \$2,899

Students: Early Reg. \$1,499 Reg. \$1,899
